Abstract (en)

[origin: WO2022090015A1] The invention relates to a method for analyzing the surroundings of a motor vehicle, wherein the surroundings are analyzed multiple times in order to determine multiple results in each case, wherein each of the multiple results indicates at least whether an object is located in the surroundings of the motor vehicle or not, wherein it is determined, as an overall result, that an object is located in the surroundings of the motor vehicle if a majority of the multiple results indicates that an object is located in the surroundings of the motor vehicle, wherein it is determined, as an overall result, that no object is located in the surroundings of the motor vehicle if a majority of the multiple results indicates that there is no object in the surroundings of the motor vehicle. The invention relates to a device, a system, a computer program and a machine-readable storage medium.
