Abstract (en)

[origin: WO2022089887A1] A method is disclosed, performed by a network assistance node, for coordinating a plurality of media sessions between a media device and a plurality of wireless devices comprised in a set of wireless devices. The method comprises receiving control signaling indicative of priority information associated with at least one of the plurality of wireless devices. The method comprises receiving control signaling indicative of a network condition. The method comprises controlling communication of a congestion notification based on the priority information.
