Abstract (en)
The fire-fighting unit (1) according to the invention comprises: an inlet connection (7) for supplying an extinguishing substance to the fire-fighting unit (1); a controller (6) having inputs (22) for input data and outputs for control signals; a hydrant (5) flow-connected to the inlet connection (7) by means of a valve (9); a sensor (11) for detecting the opening of the valve (9), electrically connected to one of the inputs (22) of the controller (6); and a distributor (15) flow-connected to the inlet connection (7). The distributor (15) comprises electrovalves (16), which are output connections (24) for discharging the extinguishing substance from the fire-fighting unit (1), and these electrovalves (16) are electrically connected to the outputs of the controller (6).
