Abstract (en)
A modular pump assembly (100) includes a pump housing (110) adapted to house a drive motor (112) therein. The modular pump assembly (100) further includes a first fluid channel (114) and at least one second fluid channel (116). The first fluid channel (114) includes a first end (114A) and a second end (114B) such that the first end (114A) of the first fluid channel (114) is fluidly coupled with the pump housing (110). The at least one second fluid channel (116) includes a first end (116A) and a second end (116B) such that the first end (116A) of the at least one second fluid channel (116) is fluidly coupled with the pump housing (110). The modular pump assembly (100) is characterized in that the second end (114B) of the first fluid channel (114) is adapted to be fluidly coupled with one or more first pump component (120). Further, the second end (116B) of the at least one second fluid channel (116) is adapted to be fluidly coupled with one or more second pump component (130).
