Abstract (en)

The present invention refers to a device (1) for drying pasta which comprises detection means (13) configured for detecting the value of a desired property or physical quantity dependent on the air flow that passes through a region thereof of stabilisation (8), and electronic control means (14) configured for controlling ventilation means (10) as a function of the value of the desired property or physical quantity detected by the detection means (13). The invention also concerns a drying method using such a drying device (1).
