Abstract (en)
An electronic device according to an embodiment includes a flexible display including a first surface that displays an image and a second surface that faces away from the first surface, and a plurality of support members coupled to the display and spaced apart from each other. The plurality of support members include a first support member. The first support member includes a body part that is disposed on the second surface of the display and that extends from one end portion to an opposite end portion of the display, a first side support part that extends from one end of the body part and that is located on a first side surface of the display, a first cover part that extends from the first side support part and that is located on the first surface of the display, a second side support part that extends from an opposite end of the body part and that is located on a second side surface of the display, and a second cover part that extends from the second side support part and that is located on the first surface of the display. The body part, the first side support part, the first cover part, the second side support part, and the second cover part are integrally formed.
