Abstract (en)  
[origin: WO2022096168A1] The invention relates to an optically structured element (1) for minimising or preventing bird collisions, comprising a carrier element (2), a high-reflection region (3) and a low-reflection region (4), which optically structured element is characterised in that a double-cone reflection rate difference of a first double-cone reflection rate of the of the high-reflection region (3) and a second double-cone reflection rate of the low-reflection region (4) is greater than or equal to 5% and a VIS transmission ratio of the first VIS transmission rate and of the second VIS transmission rate is greater than or equal to 70% and less than or equal to 20%.
