Abstract (en)

[origin: WO2022098286A1] A semi-submersible wind power platform (17) having a tower (1) carrying a wind generator housed in a nacelle (2) and a plurality of arms (6), the tower comprising a main float (5) and each arm comprising a secondary float (12) to stabilize the tower. Each arm (6) consists of a strut element (7) connected between the tower (1) in a main position (10) and the secondary float (12), a first catenary element (8) connected between the secondary float (12) and a first position (13) of the tower (1), and a second catenary element (9) connected between the secondary float (12) and a second position (14) of the tower (1).
