Abstract (en)
[origin: WO2022096609A1] The invention relates to a device (10) for a motor vehicle transmission chain, comprising: - a rotating element (3) intended to be mounted to rotate about an axis (X) of rotation, the rotating element (3) comprising a radial portion (7), and a cylindrical skirt (8) of radial dimension (Ep), extending from the radial portion (7), - an annular cover (9), arranged with the rotating element (3) in order to enclose resilient members (5), wherein the cylindrical skirt (8) of the cylindrical skirt (8) and the cover (9) each comprise positioning means (80, 90) mutually interacting so as to position the cover (9) on the rotating element (3), the positioning means (80, 90) of the cylindrical skirt (8) and the cover (9) being fastened together by welding.
