Abstract (en)  
[origin: WO2022096065A1] The invention relates to a connector assembly, comprising: - a first connector, which has a housing forming an installation space and has a contact terminal accommodated in the installation space; - a second connector, which has a housing forming an installation space and has a contact terminal accommodated in the installation space; and - a locking device, by means of which the first and second connectors are locked while they are joined together. The locking device comprises a release protection component on either the first connector or the second connector and an insert on the other of the components first connector and second connector. The invention further relates to an adapter, a connector, a lateral locking device and a mounting frame for the connector assembly. The connector assembly according to the invention is easy to assemble, allows the entire device to be made compact, and has improved electromagnetic shielding and watertightness.
