Abstract (en)
[origin: WO2023016661A1] In a current sensor (8, 8'), in particular a contact-making adapter, for an electrical load (100) for attachment to a carrier system (3) with a large number of longitudinal electrical conductor tracks (5, 6) which run parallel to one another and have an alternating electric potential, wherein the current sensor (8, 8') comprises at least three, preferably at least five and particularly preferably precisely five, electrically conductive contact elements (81, 82, 83, 84, 85) with a cross-sectional width (p), in particular an operative diameter, wherein the contact elements (81, 82, 83, 84, 85) form a polygon with a height (H), provision is made for the contact elements (81, 82, 83, 84, 85) to have a contact element length (n), such as a needle length, for the conductor tracks (5, 6) to pass through.
