Abstract (en)
[origin: WO2022097028A1] A device is described for registering a user comprising an acquisition module (2), a storage module (3), an encoding module (4) and a transmission module (5). The acquisition module (2) is configured for acquiring a plurality of identification data, which can be stored using the storage module (3). The encoding module (4) is configured for encoding at least a part of the plurality of identification data and for generating a registration code representing them and which can be transmitted by means of a wireless transmission protocol by the transmission module (5).
