Abstract (en)
A mobile platform system for boats (1) comprises a first support (2) and a second support (3) connectable to a boat, a first arm (5) hinged to the first support (2) and a second arm (7), hinged to the second support (3), in which the first arm (5) and the second arm (7) can be rotated around a first axis of rotation (9), a platform (10) hinged to the first arm (5) and to the second arm (7) around a second axis of rotation (11), drive members (14) for operating the first arm (5) and second arm (7) around the first rotation axis (9) and adjustable transmission members which operatively connect the platform (10) to the first support (2) and to the second support (3) in such a way as to cause a rotation of the same around the second rotation axis (11) following the rotation of the first arm (5) and of the second arm (7), wherein the adjustable transmission members are configured to selectively cause a further rotation of the platform (10) independently of the rotation of the first arm (5) and of the second arm (7).
