Abstract (en)

Provided is an aqueous coating material composition to form a fluororesin coating on a metal substrate such as copper foil without causing a problem of powder falling. The aqueous coating material composition containing fluororesin particles (A) that can be melt-molded, further containing a binder resin (B), a non-fluorinated surfactant (C) and water (D), wherein the binder resin (B) has a weight loss of 55% or more at 400°C measured under conditions at 10°C/min under N₂, and is contained at a ratio of 10 mass% or less relative to the total solid content of the coating material composition.
