Abstract (en)
[origin: EP4242523A1] A heating/cooling system manifold (1) comprising a sleeve (2) having two openings, at least one arrangement of functional parts within the sleeve (2), and fixing means for mounting the functional parts to the sleeve (2) is described, the fixing means having a connection geometry (13). Such a manifold should have a flow capacity as big as possible. To this end, the connection geometry (13) is arranged on an outside of the sleeve (2) and a space between the fixing means is arranged within the sleeve (2).
