Abstract (en)
[origin: WO2022100995A1] The invention relates to dishwashing detergents that contain a metal complex of the general formula (I), (Aq⁺)_p[Ms⁺Lm⁻](Xo⁻)_r (I) wherein q is 1 or 2 and Aq⁺ represents a cation, selected from alkali metal cations with q = 1, ½ alkaline earth cations with q = 2 and ammonium ions with q = 1, Ms⁺ represents an aluminum ion, a transition metal ion or a lanthanoid metal ion, s is a number from 1 to 5, L represents a ligand of the formula (II), in which every R1 and R2 independently of each other is selected from H, unsubstituted or substituted, linear or branched C1-20 alkyl, unsubstituted or substituted, linear or branched C1-20 heteroalkyl, unsubstituted or substituted aryl, unsubstituted or substituted heteroaryl, unsubstituted or substituted, linear or branched C2-20 alkenyl, unsubstituted or substituted, linear or branched C2-20 heteroalkenyl and unsubstituted or substituted, linear or branched C2-20 alkynyl, unsubstituted or substituted, linear or branched alkylaryl, unsubstituted or substituted, linear or branched alkylheteroaryl, every R3 independently from each other represents CH₂COOH or CH₂COO⁻, n is 0 or 1, Xo⁻ represents an anion, selected from F⁻, Cl⁻, Br⁻, I⁻, OH⁻, HSO₃⁻, SO₃²⁻, SO₄²⁻, HSO₄⁻, NO₂⁻, NO₃⁻, PO₄³⁻, HPO₄²⁻, H₂PO₄⁻, BF₄⁻, PF₆⁻, ClO₄⁻, acetate, citrate, formate, glutarate, lactate, malate, malonate, oxalate, pyruvate, tartrate, methane sulfonate, methyl sulfate, p-toluene sulfate and succinate, m is a number from 0 to 5 and o is a number from 1 to 3, and p and r independently of each other represent a number from 0 to 6, with the proviso that the sum of s and the product of p and q is equal the sum of m and the product of r and o, and with the further proviso that the charge of formula (II) resulting from the residues R1, R2 and R3 is neutral or negative.
