Abstract (en)
[origin: WO2022100975A1] The invention relates to a method for manufacturing a thermally insulating barrier (5) for a wall (1) of a fluid-tight and thermally insulating tank which is attached to a supporting structure (2), the method comprising the following steps: anchoring a plurality of insulating panels (11) by means of at least one anchoring device (12), the plurality of insulating panels (11) comprising a housing (18) in which the anchoring device (12) is received; inserting an insulating stopper (25) inside the housing (18) and pushing it in the direction of the supporting structure (2) until the insulating stopper (25) bears in the direction of the supporting structure (2) against a bearing surface; levelling the insulating stopper (25) so that the internal end of the insulating stopper (25) is flush with the internal surface of the plurality of insulating panels (11).
