Abstract (en)
[origin: WO2023148672A1] Asset-based investment product can be created out of any activity or asset that may generate income. These securities can be created out of any movable or immovable property, tangible assets, or intangible assets such as NFTs. Such an investment product can focus on long-lasting value classes of assets, such as real estate, as long as they can generate income and/or are subjected to long-lasting value appreciation or sustainability. In at least one embodiment, such an asset-based investment product will only pool "safe parts" of assets, can create "safe part tokens" or their equivalent out of these assets, and can offer senior tranches level to investors acquiring those "safe part tokens." These senior tranches may be rewarded more than junior tranches after the "safe part" of each of the underlying assets has been bought, described, and registered in the blockchain owned or used by the asset holder or its beneficiaries.
