Abstract (en)
[origin: WO2022106327A1] A ski or walking pole connection system for releasably connecting a hand strap to a handle of the pole, wherein the system comprises a buckle connected to the hand strap, and a locking device connected to the handle, wherein the locking device is adapted to receive the buckle for locking the buckle and connecting the hand strap to the handle of the pole. A recess of the locking device is arranged to receive a locking head of the buckle and wherein the buckle is locked by a first edge of the locking device abutting a second edge of the buckle. A puller connected to the buckle is configured to lift the second edge such that the buckle may be released from the locking device.
