Abstract (en)
[origin: WO2022106499A2] The present invention relates to an earth-based facing panel the core of which comprises, optionally, between 1 and 20% by weight of a material having a silica content greater than 50% (by weight), an open porosity greater than 45%, a particle size of less than or equal to 5 mm, between 0.5 and 15% by weight of crystalliser; between 15 and 60% by weight of binding agent selected from slag, metakaolin and plaster, and optionally lime; and between 20 and 80% by weight of earth having a particle size of less than or equal to 5 mm; the invention also relates to a method for producing such a facing panel and a use of at least one crystalliser to produce an earth-based facing panel.
