Abstract (en)
[origin: WO2022106590A1] The invention relates to an improvement in the field of sanitary engineering. It discloses an outlet element (1) for a sanitary fitting which comprises a base element (2) and a valve device (3) which is connected to the base element (2) and can be adjusted relative to the base element (2) between at least two switching positions for switching over between at least two separate water conduits (4, 5). In order to seal a passage between an outlet opening (6) of the base element (2) on the outflow side and at least one inlet opening (7, 8) of a connected water conduit (4, 5) on the inflow side, the base element (2) has a sealing element (9) which in each of the at least two switching positions is designed to seal the relevant passage between an outlet opening (6) of the base element (2) on the outflow side and the at least one inlet opening (7, 8) of the connected water conduit (4, 5) on the inflow side.
