Abstract (en)
[origin: WO2022106262A1] The invention relates to a terminal (1) for electrical cables (L1, L2), comprising a housing (G) on which are provided at least two connections (A, A1-A6) for electrically connecting in each case one electrical cable (L1, L2) to one connection line (14, 14A-14F) arranged in the housing (G), wherein the connection lines (14, 14A-14F) are electrically disconnected from each other at a disconnection point (X1-X6) between two contacts (K, K1-K6). According to the invention, the housing (G) forms at least one receptacle (R) at which the contacts (K, K1-K6) of the disconnection point (X1-X6) of the connection lines (14, 14A-14F) are arranged such that they can be electrically contacted by a component (13, 18A-18C) which can be attached to the at least one receptacle (R).
