Abstract (en)
[origin: WO2022106246A1] The invention relates to a heating structure (1) which is intended, in particular, to be installed inside a passenger compartment of a vehicle and which takes the form, in particular, of a radiant panel, said heating structure (1) comprising at least one resistive layer arranged to release heat when an electric current passes therethrough, said structure further comprising, in particular, an electrode array including a plurality of contact electrodes (34) arranged to be in electrical contact with the resistive layer in order to allow electric current to flow through the resistive layer, said resistive layer being borne by a substrate (16) made, in particular, from a flexible material.
