Abstract (en)  
A folding chair is disclosed. When the folding chair is folded, two supporting assemblies (100) are firstly folded and furled, then the first folding is carried out, one supporting assembly (100) is folded relative to a front supporting rod (60) and a rear supporting rod (70), then the second folding is carried out. The other supporting assembly (100) is folded relative to the front supporting rod (60) and the rear supporting rod (70), and when the folding chair is normally used, the two first mounting rods (11) are positioned by the first positioning rod (12). The two second mounting rods (21) are positioned by the second positioning rod (22). The folding chair can be subjected to a secondary folding, so that the volume of the folding chair is smaller after being folded, and the stability of the folding chair is better during normal use.
