Abstract (en)  
[origin: WO2022111836A1] A spawning and birth and rearing installation for fish spawn eggs and live-born juvenile fish, containing at least one spawning and birth container (1) for receiving a female fish in an advanced state of pregnancy, a rearing container (2) connected to this container (1); a line (5) connected to the bottoms of the two containers (1, 2); an intermediate bottom (4) mounted in the container (1) and having at least one opening through which the female fish cannot pass, a conveying system for conveying water from the container (1) into the container (2), is characterized by the following features: the containers (1, 2) are communicating containers; a riser line (6) connected to the line (5) is guided in the container (2) as far as a height that lies below the water level (b) in the container (1).
