Abstract (en)
[origin: WO2022111896A1] The invention relates to an energy-absorbing device (6) configured to be mounted between a bumper (2) and a longitudinal member (4) of a motor vehicle (1), the energy-absorbing device (6) comprising at least a first part (18), composed of a first reinforced material and forming a reinforcement of the energy-absorbing device (6), and a second part (20), composed of a second non-reinforced material and arranged around the reinforcement, the energy-absorbing device (6) extending in a longitudinal main direction (L) between the bumper (2) and the longitudinal member (4) and comprising at least one plate (30) which is made of a material having a hardness greater than the hardness of the second non-reinforced material and which extends across the longitudinal direction (L) of the energy-absorbing device (6).
