Abstract (en)

[origin: WO2022111951A1] The invention relates to a method for controlling a brake system of a motor vehicle, comprising multiple wheels, at least one electric machine as a drive, a service brake and electronic stability control, wherein the wheels can be braked by means of a deceleration torque (MB) applied by the service brake and at least partially by means of a deceleration torque (ME) applied by the electric machine, wherein slip resulting from braking and/or from interventions by the electronic stability control is controlled at least primarily by adapting the deceleration torque (ME) applied by the electric machine.
