Abstract (en)
[origin: WO2022112563A1] The invention relates to a protective structure (1) for protecting against moving masses, namely avalanches, rockfalls, mudflows and tree falls, comprising: - a plurality of ballast-filled wall elements (2), which are spaced apart next to each other on a support surface; and - a connection assembly (3) between every two adjacent wall elements (2), each connection assembly connecting the two adjacent wall elements (2) and allowing relative movement between the two wall elements (2); wherein the wall elements (2) can be moved relative to the support surface and relative to each other by the moving mass, namely avalanche, rockfall, mudflow or tree fall, for dissipative conversion of energy.
