Abstract (en)
[origin: WO2022161561A1] The invention relates to an arrangement of scaffolding components for facade scaffolding (20) comprising a first scaffolding post (23.1) made of metal, a second scaffolding post made of metal and a railing device (21.1) which is releasably connected to both the first scaffolding post (23.1) and the second scaffolding post. The railing device (21.1) comprises a railing pole (22.1) which extends in the direction of its railing pole longitudinal axis (42.1). The railing pole (22.1) has a first railing pole end (41.1) and a second railing pole end, which extend away from one another in opposite directions. The first railing pole end (41.1) is designed with a rear-engaging element (83) which delimits a recess (73), lies opposite a first hook nose (67) of a mounting hook (50), and has a free rear-engaging element end (84) which extends towards a free rear-engaging hook end (70) of the hook nose (67) and which partially engages over a rosette wall-section receiving space (80) of the recess (73).
