Abstract (en)
[origin: WO2022186493A1] The present invention relates to a method of performing data transmission by an Integrated Access and Backhaul (IAB) node associated with both a first Central Unit (CU) and a second CU in a wireless communication system. Especially, the IAB node forwards a packet provided from at least one of the first and second CUs to a User Equipment (UE). In particular, the method includes the steps of: transmitting at least one first packet to the UE, wherein the at least one first packet is provided from the first CU; receiving information about security configuration related to a second CU; transmitting the information about security configuration to the UE, based on at least one second packet being provided firstly from the second CU after receiving the security configuration message; and transmitting the at least one second packet to the UE.
