Abstract (en)
A dispensing device (1) comprising a main body (3) and a spout (4) with an outer shell (5) and an outlet tube (6) and outlet conduit (7) housed in the outer shell (5) is described. The outer shell (5) comprises a main portion (8) and a terminal portion (9) that can be positioned in a first position in which the terminal portion (9) is coupled with the main portion (8) and in a second position in which the terminal portion (9) is separated from the main portion (8). The spout (4) comprises a first outlet (10) in fluidic connection with the outlet tube (6) and configured to allow for the discharging of a first liquid, and the first outlet is arranged in and/or coupled to the terminal portion (9). The spout also comprises a second outlet (11) in fluidic connection with the outlet conduit (7) and configured to allow for the discharging of a second liquid. The second outlet (11) is arranged in and/or coupled with the main portion (8).
