Abstract (en)

A system (100) and a method (900) of testing a specimen. The system (100) includes an endcap (102), a plurality of bars (104), a plurality of strain gauges (106), and a gas gun (108). The endcap (102) includes a first surface (202) and a second surface (204) opposite to the first surface (202). The first surface (202) is curved. Each bar (104) is disposed in contact with the second surface (204) of the endcap (102) and extends along a longitudinal axis (LA). Each strain gauge (106) is disposed on a surface (302) of a corresponding bar (104) from the plurality of bars (104). At least one strain gauge (106) is disposed on the surface (302) of each bar (104). The gas gun (108) is configured to fire a specimen (602) towards the first surface (202) of the endcap (102) such that the specimen (602) impacts the first surface (202) at an oblique angle (A1) relative to the longitudinal axis (LA).
