Abstract (en)

[origin: WO2022122813A1] The present invention relates to an apparatus for producing a dialysis concentrate or another liquid, wherein the apparatus has an inlet for a solvent for dissolving or mixing with a raw material located in a container, which raw material is soluble in the solvent or miscible therewith, and a container containing a raw material to be dissolved by means of the solvent or which is miscible with the solvent, wherein the apparatus has connecting means for connecting to the container, characterized in that the apparatus has a mixing unit which is self-regulating and comprises a mixing line and a suction unit arranged in the mixing line and a mixing chamber, wherein the suction unit can be fluidically connected to the inlet for the solvent and, by means of a suction line, to the container which can be connected to the apparatus, and wherein a return line downstream of the mixing chamber leads back to the container which can be connected to the apparatus.
