Abstract (en)  
[origin: WO2022118185A2] The invention relates to a watercraft, in particular a SWATH-type yacht (1). Said watercraft is intended to have improved and greater functional properties. To this end, the watercraft, in particular a SWATH-type yacht, has upper works (2) that receive a structure (3), and on the underside thereof, i.e. the wet deck (8), two stilts, i.e. partial hulls (4, 5), are arranged which are spaced apart from one another transversely in the direction of travel. Each partial hull (4, 5) is positioned on a submerged hull (6, 7) which is arranged substantially in the direction of travel of the watercraft and extends over at least part of the upper works (2). The submerged hulls (6, 7) have characteristic narrowed portions in cross section, which portions are formed on the longitudinal extension of swimmer profiles (22, 23) of the partial hull (4, 5).
