Abstract (en)

[origin: WO2022117970A1] The invention relates to a process (100) for protecting a part comprising an aluminum-based alloy having a copper content of greater than or equal to 0.5% by mass, the process comprising the depositing (102) of a non-conductive protective layer over the entire part, the laser stripping (104) by means of a laser beam of an area of the non-conductive protective layer so as to form an unprotected area, the chemical conversion (106), with trivalent chromium, of the unprotected area so as to form a conductive protective layer, and the drying (108) of the part.
