Abstract (en)
[origin: WO2022117340A1] The present invention relates to a building development (1), comprising a building (4) situated on a building-development foundation (2), wherein the building-development foundation (2) has a pontoon (8), having at least one float (6), for floating on a liquid, and has a pile mooring (10) which extends along a pile-mooring axis (X) perpendicularly to the pontoon (8) through a pass-through opening (14) of the pontoon (8). The pass-through opening (14) is formed centrally in the pontoon (8) and the pontoon (8) is mounted so as to be rotationally movable about the pile mooring (10) that extends through the pass-through opening (14). The pontoon (8) can be oriented and positioned about the pile-mooring axis (X), wherein the pile mooring (10) projects through the pass-through opening (14) of the pontoon (8), and through a first opening (16) in a base of a receiving chamber situated above the pass-through opening (14), and into the receiving chamber. The invention also relates to a building-development foundation (2) and a pile mooring (10) of such a building development (1).
