Abstract (en)
[origin: WO2022117793A1] The invention relates to a support structure (1) comprising at least one central anchoring rod (3), intended to be driven by one end into a ground in order to form an anchor, at least two bars (51, 52) arranged so as to form a central cross (5) configured to be crossed by the central anchoring rod (3), and a frame surrounding the central cross (5). According to the invention, the at least two bars (51, 52) of the central cross (5) each have two end plates (11) respectively comprising a cable passage (111), and in that said structure (1) comprises at least one peripheral cable (7) arranged around a central cross (5) passing through the cable passages (111), so as to form the frame.
