Abstract (en)

[origin: WO2022117152A1] The invention relates to a closing device for a motor vehicle lock, in particular to a closing aid for a motor vehicle door lock. According to its basic design, said closing aid has a locking mechanism (1, 2) substantially consisting of a rotary latch (1) and a pawl (2). Furthermore, an electric motor (4) and a transmission (5, 6, 7, 8, 9) following the electric motor (4) are realized. The transmission (5 to 9) operates on the rotary latch (1) at least during a closing operation. According to the invention, for the mechanical interruption of the closing operation, the transmission (5 to 9) has a force flux element (8) which can be selectively engaged and disengaged.
