Abstract (en)  
[origin: WO2022117677A1] The present invention relates to a digital method for tracing data originating from a plurality of data sources, the method comprising the steps of: a. obtaining initial data originating from a plurality of data sources, each initial datum comprising initial elements and initial connections, each initial element having a type and a value; b. determining a final datum on the basis of at least two initial data following the merging with one another of initial elements of the initial data according to a merging strategy, the merged initial elements making it possible to obtain a merged element having a type and a value; and, c. determining a merging history for each merged element, the merging history comprising the type and the value of each initial element from which the merged element originates, the type and the value of the merged element and data relating to the merging strategy.
