Abstract (en)

[origin: WO2022122230A1] The invention relates to a method for measuring the influence of a transparent pane (14), in which a displacement field induced by the pane (14) is determined, wherein in a first step a first image of a textured surface without the transparent pane (14) is acquired, in a second step a second image of the textured surface with the transparent pane (14) is acquired, and in a third step the displacement field is determined by analyzing the two images using an optical flow method.
