Abstract (en)

[origin: WO2022117149A1] The invention relates to a layer system for an organic electronic component, having a first electrode (3), a second electrode (7), and at least one photoactive layer (5) and/or at least one fullerene layer (6), wherein: the at least one photoactive layer and/or the at least one fullerene layer is/are arranged between the first electrode and the second electrode; and the at least one photoactive layer and/or the at least one fullerene layer has/have at least one stabilizing additive. The invention also relates to an electronic component having such a layer system with at least one stabilizing additive and to the use of such a layer system with at least one stabilizing additive in an organic electronic component.
