Abstract (en)

[origin: WO2022117189A1] A method is disclosed, the method comprising transmitting (640, 641) first 'data using a first level of redundancy in a first message (601, 602, 603, 604, 606, 607, 608); storing (630, 631) at least part of the first data; transmitting (640, 641) a first downlink request message (605, 609); obtaining first information (610) in response to the first downlink request message (605, 609); determining whether at least part of the first data needs to be retransmitted based on the first information (610), and transmitting (640) second data using a second level of redundancy in one or more second messages (611) when it is determined that at least part of the first data needs to be retransmitted, wherein the second level of redundancy is lower than the first level of redundancy, and wherein the second data comprises the at least part of the first data for which it was determined that it needs to be retransmitted. Additionally, a method that is complementary to the above-disclosed method is disclosed. According to apparatuses (4, 5, 100, 130), systems (1) and computer programs for each of the methods are also disclosed.
