Abstract (en)  
The invention relates to a container with a lid retainer system. Said system comprises a body (1) with four side walls (2), which are opposite one another in pairs, an upper opening, and a base; and a lid (3) with a skirting (4) which projects along the perimeter. When the lid (2) is in a closed position, it completely covers the upper opening of the body (1), and the skirting (4) extends along the outer portion of the side walls (2) of said body (1). The container comprises a lid retainer system with housings (5) on at least two opposite side walls (2), said housings facing one another, and retainer devices (6) which are housed in the recesses (5) of the side walls when the lid (2) is arranged in an open position, such that the lid (2) is supported on two side walls (2) opposite one another.
