Abstract (en)
The present invention provides a white light source comprising a blue light emitting LED having a light emission peak of 421 to 490 nm and satisfying a relational equation of $-0.2 \leq P_{\lambda} \times V_{\lambda} / P_{\lambda_{\max 1}} \times V_{\lambda_{\max 1}} - B_{\lambda} \times V_{\lambda} / B_{\lambda_{\max 2}} \times V_{\lambda_{\max 2}} \leq +0.2$, assuming that: a light emission spectrum of the white light source is $P(\lambda)$; a light emission spectrum of black-body radiation having a same color temperature as that of the white light source is $B(\lambda)$; a spectrum of a spectral luminous efficiency is $V(\lambda)$; a wavelength at which $P(\lambda) \times V(\lambda)$ becomes largest is $\lambda_{\max 1}$; and a wavelength at which $B(\lambda) \times V(\lambda)$ becomes largest is $\lambda_{\max 2}$. According to the above white light source, there can be provided a white light source capable of reproducing the same light emission spectrum as that of natural light.
