Abstract (en)  
[origin: WO2022122187A1] The present application relates to the use of an antimicrobial composition essentially comprising natural ingredients as a preservative activator in cosmetic products. Due to the selection of the components of said antimicrobial composition, it has very broad compatibility with most cosmetic product formulations, and can, in particular, be integrated into said formulations without destabilising them or having to modify them, while maintaining the transparency of the cosmetic products.
