Abstract (en)

[origin: WO2022122278A1] The invention relates to a suction device comprising a device body (12), a fan device (72) for generating a suction flow, a filter device (82), a filter cleaning device (88) for the filter device (82), and a battery device (120) for providing electric energy, wherein the device body (12) is paired with a geometric central plane (116) which is oriented perpendicularly to a standing plane (56) of the device body (12), wherein the mass center of gravity (118) of the device body (12) lies at least approximately on the central plane (116), the filter cleaning device (88) is arranged on the device body (12) such that the mass center of gravity of the filter cleaning device (88) lies at least approximately on the central plane (116), and the battery device (120) is arranged on the device body (12) such that the mass center of gravity of the battery device (120) lies at least approximately on the central plane (116).
