Abstract (en)

[origin: CA3201544A1] The present invention relates to a device for detecting a pressure, of the type comprising a detection element on which a pressure is exerted, a transducer connected to said detection element and an elastically deformable shell. Characteristically, according to the invention, said shell (1) is made of biocompatible and sterilisable material, has two opposing walls (11; 19) and an insertion opening (13), and said detection element comprises at least one elastically deformable tube (7), said tube comprises a portion arranged in said shell (1), said tube is closed at one end (71) and filled with a fluid, the other end of said tube being open, arranged outside said shell (1) and connected to said transducer (3).
