Abstract (en)  
[origin: WO2022123178A1] The invention relates to a method for the cryogenic grinding of at least one powder, comprising the following steps: (a) introducing a cryogenic fluid into an attrition mill comprising attrition means, (b) introducing the powder or powders into the attrition mill, and (c) setting the attrition mill into rotational movement, and wherein - the ratio  $VMA / (VMA + VFC)$  of the volume of the attrition means VMA to the sum of the volume of the attrition means VMA and the volume of the cryogenic fluid VFC is comprised between 0.2 and 0.8, and - the rotational speed of the attrition mill, during step (c), is comprised between 100 rpm and 20 000 rpm. The invention also relates to particles of metal or metal alloy, to the use thereof, to a coating method employing them and to the use of such a coated material.
