Abstract (en)  
[origin: CA3198801A1] The invention relates to laminated glazing comprising at least first and second elementary transparent laminated panels whose edges are next to one another and whose respective glass sheets are distinct and separated from one another, characterised in that the glass sheets (1, 4) of the first panel, on the one hand, and the glass sheets (2, 5) of the second panel, on the other hand, are joined together in pairs by an intermediate adhesive layer (7) which is rigidly attached to the surface of the assembly of the first and second panels and in that, in a region in which the first and second panels are positioned next to one another, a structuring element (8) is inserted into the intermediate adhesive layer (7). The invention also relates to the use of said laminated glazing as glazing for an air vehicle, in particular a drone, a plane or a helicopter, or a land vehicle, in particular a road or rail vehicle, or a watercraft.
