Abstract (en)

[origin: WO2022128881A1] Herein we have identified a protein signature that is easily measured in blood and urine and highly predictive of bladder cancer (BC) risk in Type 2 Diabetes Mellitus (T2DM) patients. This biomarker model could be applied to screen T2DM patients presenting with haematuria for BC in diabetes clinics. Earlier urology referral of T2DM patients will improve outcomes for these patients.
